# Resumo de Buildings of Earth and Straw: Structural Design for Rammed Earth and Straw Bale Architecture

Chelsea Green's The Rammed Earth House and The Straw Bale House chronicle the possibilities and realities of straw bale and rammed earth construction. Buildings of Earth and Straw fills in the gaps for professional builders, contractors, engineers, inspectors, lenders, and architectural students.

It includes special construction requirements of earth and straw, design capabilities and limitations of these materials, and documentation of testing data for use in addressing the concerns of officials. This book offers the nuts and bolts of rammed earth and straw bale building techniques, and why they are so spectacular, durable, and earth-friendly.
