ECONOMETRIC ANALYSIS

OF CROSS SECTION

AND PANFI DATA

Resumo de Econometric Analysis of Cross Section and Panel Data

The second edition of this acclaimed graduate text provides a unified treatment of two methods used in contemporary econometric research, cross section and data panel methods.

By focusing on assumptions that can be given behavioral content, the book maintains an appropriate level of rigor while emphasizing intuitive thinking.

The analysis covers both linear and nonlinear models, including models with dynamics and/or individual heterogeneity. In addition to frameworks (particular methods estimation of and maximum likelihood), specific linear and nonlinear methods are covered in detail, including probit and logit models and their multivariate, Tobit models, models for count data, censored and schemes. causal (or treatment) effects. and missing data duration analysis. Econometric Analysis of Cross Section and Panel Data was the first graduate econometrics text to focus on microeconomic data structures. allowing assumptions be separated into population and sampling assumptions.

This second edition has been substantially updated and revised. Improvements include a broader class of models for missing data problems; detailed treatment cluster more of problems. important topic for empirical researchers; expanded discussion "generalized (GIV) instrumental variables" estimation: coverage (based on the author's own recent research) of inverse probability weighting; a more complete framework for estimating treatment effects with panel data, and a firmly established link between approaches nonlinear data econometric to panel and equation" "generalized estimating literature popular in statistics and other fields.

New attention is given to explaining when particular econometric

methods can be applied; the goal is not only to tell readers what does work, but why certain "obvious" procedures do not.

The numerous included exercises, both theoretical and computerbased, allow the reader to extend methods covered in the text and discover new insights.
